## MARKET COMMENTARY

DCE iron ore futures declined by 1.88 % today, the main contract closed at 836.5.The traders' willingness to ship is high.The steel mills are active to purchase.The overall trading sentiment of the market is more.PBF at Shandong port deal 900 yuan/mt,decrease 16 yuan/mt. SSF at Shandong port deal 760 yuan/mt,decrease 15 yuan/mt. PBF at Tangshan port deal 920 yuan/mt. Today's news fluctuated sharply, with reports of a meeting between relevant national departments and key futures companies to analyze and judge the iron ore market and price trends. The market is experiencing panic, and the iron ore market continues to weaken. But currently, there is no specific information flowing out of the meeting, and the pessimistic attitude may be digested in the short term. The current market is gradually entering the peak season, and the finished product table needs to see marginal improvement compared to the previous month, with average year-on-year improvement efforts. In the future, it is still necessary to pay attention to the changes in steel mill profits and finished product demand, and it is expected that ore prices will fluctuate strongly in the short term.

### Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

**Data Exclusions***

| | 62% | 58% | 65% |
|---|---|---|---|
| Port Index | 0 | 0 | 0 |
| Seaborne index | 0 | | 0 |
| Lump Index 62.5 | 0 | | |

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.

## AVERAGE IRON ORE SPECIFICATIONS APPLIED FOR BRAND PRICE ASSESSMENTS
