MARKET COMMENTARY

Dalian iron ore futures surged significantly during the afternoon session, with the most-active I2605 contract settling at 801 RMB/mt, a 0.69% increase over the previous trading day.

In the spot market, traders showed a reasonable willingness to sell, while steel mills maintained a "hand-to-mouth" procurement strategy with average inquiry levels, resulting in a moderate overall trading atmosphere; specifically, PB fines traded at 805–808 RMB/mt in the Shandong region (up 0–3 RMB/mt) and 820–826 RMB/mt in the Hebei region (up 1–3 RMB/mt).

According to SMM data, the volume of production impacted by blast furnace maintenance this week is 1.8371 million tonnes, a week-on-week decrease of 58,300 tonnes, suggesting a slight recovery in hot metal output which, combined with growing pre-holiday restocking expectations, continues to support a firm, range-bound trend for iron ore prices. Given the current positive market sentiment and improving fundamentals, iron ore prices are expected to sustain this strength in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
