MARKET COMMENTARY

Today, iron ore prices turned from weak to strong, with the main contract I2605 closing at 786.5 yuan/ton, up 0.5% from the previous trading day. Spot prices rose by 2–5 yuan/ton compared to the previous trading day. Today, traders demonstrated moderate enthusiasm in offering prices, while steel mills replenished their inventories as needed. Overall, market sentiment remained relatively active.

Industry data released today showed a significant decline in the apparent demand for the five major types of steel products, accompanied by an accumulation of finished product inventories at steel mills. This was primarily driven by widespread rain and snow across the country, coupled with the seasonal off-season of the industry, which led to a continued weakening of end-user demand and accelerated inventory accumulation. However, the continuous decline in ore prices this week has somewhat alleviated market pessimism. At the same time, steel mills have actively increased their procurement efforts to build up inventories ahead of the Spring Festival, providing support for iron ore prices and contributing to their modest upward trend.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
