MARKET COMMENTARY

Iron ore prices showed an N-shaped rise today, with the main contract I2605 finally closing at 784.5 yuan per ton, up 2.28% from the previous session. Meanwhile, spot prices increased by 5-15 yuan compared to the previous trading day. Traders showed moderate enthusiasm in quoting prices, while steel mills primarily purchased based on rigid demand. Overall, spot market transactions were average.

This week, both supply and demand for iron ore weakened. SMM data showed that global iron ore shipments totaled 27.84 million tons, a sharp decline of 7.01 million tons, or 20.1%, from the previous week. Due to cyclones, shipments from Australia and Brazil dropped significantly last week, while shipments from countries such as South Africa and India also decreased. Meanwhile, China's iron ore arrivals stood at 23.07 million tons, down 1.21 million tons, or approximately 5%, from the previous week.

In addition, the current pace of blast furnace production resumption is relatively slow, leading to weak demand for iron ore. However, given the structural shortage of certain iron ore resources and the upward trend in transportation costs, the bottom support for iron ore prices remains relatively strong. Therefore, iron ore prices are expected to fluctuate within a range and exhibit a relatively strong trend both domestically and internationally this week.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
